Office Action Summary

Application No.

09/377,611

Applicant(s)

LARA ET AL.1

Examiner

Salad E Abdullahi

Art Unit

2157

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 16 December 2003.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☐ Claim(s) 2,4-13,15 and 19-29 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☒ Claim(s) 28 and 29 is/are allowed.
- 6) ☒ Claim(s) 1,2,4-13 and 19-26 is/are rejected.
- 7) ☒ Claim(s) 27 is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12/16/2003 has been entered.
2. Applicants remarks filed on 12/16/2004 with regard to claims 1-2, 4-13, 15 and 19-26 have been fully considered but they are moot in view of new ground of rejection.

Allowable Subject Matter

3. Claims 28-29 are allowed.
4. Claim 27 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 1-2, 4-13, 15 and 19-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Christie et al U.S. Patent No. 6,182,117[hereinafter Christie] in view of Bogantz et al., U.S. Patent No. 6,631,395[hereinafter Chessell].

As per claim 1, Christie et al discloses a method for replicating changes in a master source file set on a destination file system located on a host, the destination file system for access by a web server, comprising the steps of:

identifying changes in the source file set (identifying changes made to objects in local site's database (see col. 3, lines 9-65 and col. 5, lines 13-20);

storing the identified changes in a modification list (storing updates in an event table), (see col. 5, lines 13-37);

transmitting the modification list to an agent in communication with at least one server, the agent having access to a destination file stem, the destination file, the destination file system, the agent and at least one server running on the same host, thereby notifying the at least one server that the master source file set has changed (see fig. 2 and col. 5, lines 13-37); and

receiving a response from the agent after the step (d) indicating that the destination file system installed the identified changes(col. 6, lines 24-30 and col. 19, lines 21-27).

Christie is silent regarding: transmitting a signal to the agent separate from the modification list, the signal indicating that the agent is permitted to install the changes in the at least one server.

Bogantz in an analogous art discloses a system for replicating database changes including transmitting a signal to the agent separate from the modification list, the signal indicating that the agent is permitted to install the changes in the at least one server (see fig. 2 and col. 8, lines 8-24). Therefore, it would have been obvious to one having ordinary skill in the art at the time of the invention to incorporate the teaching of Bogantz

Art Unit: 2157

such transmitting a signal to the agent separate from the modification list, the signal indicating that the agent is permitted to install the changes in the at least one server into the Christie's system such that changes the master database records can be replicated to ensure data atomicity, data synchronicity and fault tolerance during all phases of processing.

Christie and Bogantz are silent regarding: the computer system includes a web server system.

However, a web server system is well known system, part of web service system.

Furthermore, Christie et al discloses replicating data between computer sites, which are located remotely from each other indicating this replication process, can obviously be utilized in web cache system in order to replicate data from a particular web site to a web servers closer to the client computers. Therefore, it would have been obvious to one having ordinary skill in art at the time of the invention to incorporate the a web server system into the system of Christie and Bogantz because the advantage of implementing replicating service using a web server is that new features can be added easily, can accessed via the Internet to enhance the service and can dynamically minimize latency.

In considering claim 2, Christie discloses the method of claim 1, further comprising the step of:

transmitting the copy of a changed file of the master file set to the agent (see col. 3, lines 11-24).

In considering claim 4, Christie et al discloses the method of claim 1, wherein the identifying step comprises the steps of:

inspecting a current version of the master source file set (see col. 3, line 65 to col. 4, line 10, and col. 5, lines 13-37);

comparing the current version to a previous version of the master source file on the master computer (col. 5, lines 13-37).

In considering claim 5, Christie the method of claim 1, wherein the identifying step comprises the steps of:

installing a device driver to perform file operations and recording, by the device driver, changes to the source file set (see col. 10, lines 16-20); and

recording, by the device driver, changes to the master source file set (see col. 3, line 65 to col. 4, line 10, and col. 5, lines 13-37);

In considering claim 6, Christie the method of claim 1, wherein the identifying step comprises the steps of:

receiving a manifest (table) describing changes to the source file set (see col. 3, line 65 to col. 4, line 10, and col. 5, lines 13-37).

In considering claim 7, Christie discloses the method of claim 4, wherein the comparing step comprises comparing file attributes of the file current version of the master source

file set to the file attribute of the previous version of the master source file set the current version to a previous version of the master source file on the master computer (see col. 5, lines 13-37).

In considering claim 8, Christie discloses the method of claim 7, wherein the file attribute comprises at least one attribute from a group consisting of file size, file permission, file ownership, modification time and hash of the file (see col. 14, lines 51-67).

In considering claims 9-13. "Official Notice" is taken that both the concept and advantage of using calling a script of user configurable instruction by calling an operating system is well known in the art. Therefore, it would have been obvious to one having ordinary skill in the art at the time of the invention to utilize a calling a script of user configurable instruction by calling an operating system function because user configurable scripts are known to execute user function that are specific to user's needs.

In considering claim 15, Christie et al., discloses a system, wherein the transmitting step comprises multi-casting (see col. 5, lines 21-37).

As per claim 19, Christie et al discloses a system comprising the steps of:
a manager (agent manger 320) for managing the replicating system (see fig. 3a and col. 3, lines 9-65 and col. 5, lines 13-20);
a host (314) comprising a server (321) for receiving requests and agent in communication with the manager and the server (see fig. 3a and col. 10, lines 34-67);
storing the identified changes in a modification list (storing updates in an event table), (see col. 5, lines 13-37);and
a content distributor (replicator 308) in communication with the host and the manager, the content distributor providing notification of changes to a master source file set on a master computer to the host (see fig. 3a and col. 10, lines 34-67).
receiving a response from the agent indicating that the identified changes are installed (see col. 6, lines 24-30 and col. 19, lines 21-27).

Christie is silent regarding: the content distributor transmitting a signal to the agent separate from the notification of changes, the signal indicating that the agent is permitted to install the changes in the at least one server.

Bogantz in an analogous art discloses a system for replicating database changes including transmitting a signal to the agent separate from the modification list, the signal indicating that the agent is permitted to install the changes in the at least one server (see fig. 2 and col. 8, lines 8-24). Therefore, it would have been obvious to one having ordinary skill in the art at the time of the invention to incorporate the teaching of Bogantz such transmitting a signal to the agent separate from the modification list, the signal indicating that the agent is permitted to install the changes in the at least one server into

Art Unit: 2157

the Christie's system such that changes the master database records can be replicated to ensure data atomicity, data synchronicity and fault tolerance during all phases of processing.

Christie and Bogantz are silent regarding: the computer system includes a web service system.

However, a web server system is well known system, part of web service system.

Furthermore, Christie et al discloses replicating data between computer sites, which are located remotely from each other indicating this replication process, can obviously be utilized in web server system in order to replicate data from a particular web site to a web servers closer to the client computers. Therefore, it would have been obvious to one having ordinary skill in art at the time of the invention to incorporate the a web server system into the system of Christie and Bogantz because the advantage of implementing replicating service using a web service system is that new features can be added easily, can accessed via the Internet to enhance the service and can dynamically minimize latency.

In considering claim 20, Christie discloses the system of claim 19, further comprising a traffic manager (moderator 314) for directing requests (see col. 10, lines 34-53).

In considering claim 21, Christie discloses the system of claim 19, wherein the content distributor comprises:

an identification module for identifying changes in the master source file set (identifying

Art Unit: 2157

changes made to objects in local site's database), (see col. 3, lines 9-65 and col. 5, lines 13-20);

a modification list for storing the identified changes in a modification list (storing updates in an event table), (see col. 5, lines 13-37), comprising unique identifiers (UID) (see col. 3, lines 47-65);

a transmitter for transmitting the modification list to an agent (340) having access to a destination file stem (see col. 5, lines 13-37); and

a receiver receiving a response from the computer indicating that the identified changes are installed (col. 6, lines 24-30 and col. 19, lines 21-27).

In considering claim 22, Christie discloses the system of claim 21, further comprising a transmitter for transmitting a copy of a changed file of the master source file set to the agent (see col. 3, lines 9-65 and col. 5, lines 13-20);

In considering claim 23, Christie discloses the system of claim 21, wherein the agent comprises an installer for installing a copy of changed file of the master source file set on the destination system (see col. 6, lines 24-30 and col. 19, lines 21-27).

As per claim 24, Christie discloses a content distributor in communication with a computer, comprising:

an identification module for identifying changes in the master source file set (identifying changes made to objects in local site's database), (see col. 3, lines 9-65 and col. 5,

Art Unit: 2157

lines 13-20);

a modification list for storing the identified changes in a modification list (storing updates in an event table), (see col. 5, lines 13-37), comprising unique identifiers (UID) (see col. 3, lines 47-65);

a transmitter for transmitting the modification list to an agent (340) having access to a destination file stem (see col. 5, lines 13-37); and

a receiver receiving a response from the computer indicating that the identified changes are installed (col. 6, lines 24-30 and col. 19, lines 21-27).

Christie is silent regarding: transmitting a signal to the agent separate from the modification list, the signal indicating that the agent is permitted to install the changes in the at least one server.

Bogantz in an analogous art discloses a system for replicating database changes including transmitting a signal to the agent separate from the modification list, the signal indicating that the agent is permitted to install the changes in the at least one server (see fig. 2 and col. 8, lines 8-24). Therefore, it would have been obvious to one having ordinary skill in the art at the time of the invention to incorporate the teaching of Bogantz such transmitting a signal to the agent separate from the modification list, the signal indicating that the agent is permitted to install the changes in the at least one server into the Christie's system such that changes the master database records can be replicated to ensure data atomicity, data synchronicity and fault tolerance during all phases of processing.

Art Unit: 2157

In considering claim 25, Christie discloses the content distributor of claim 24, wherein the transmitter is also for transmitting a copy of a changed file of the master file set to the agent for installation to the destination file system (see col. 3, lines 11-24).

In considering claim 26 Christie discloses the method of claim 7, wherein the file attribute is stored in a list of file attributes (see col. 14, lines 51-67).

CONCLUSION

7. The prior art made of record and not relied upon is considered pertinent to the applicant's disclosure.

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Salad E Abdullahi whose telephone number is 703-308-8441. The examiner can normally be reached on 8:30AM - 5:00PM. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ario Etienne can be reached on 703-305-4792. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

9. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
